

CELL THERAPY LECTURE SERIES

SIDE EFFECTS OF CAR TREATMENT AND MANAGEMENT

Chimeric Antigen Receptor (CAR) treatment has given hope to many patients who would otherwise succumb to their relapsed/refractory diseases.

However, this new therapy is often associated with significant toxicities, leading to morbidities and even mortalities occasionally.

This talk focuses on the common side effects of CAR-T therapy as well as the early recognition and management of these side effects.

SPEAKER

DR ESTHER CHAN

Senior Consultant
Division of Haematology, Dept
of Haematology-Oncology,
National University Cancer
Institute Singapore
